

Your day in the app

Three things, all on your phone: log what you finished, record what shipped, and see your own pace. Two minutes a day. Nothing to install.

Open the app

[Get it on your phone](#) [Log your day](#) [Fix a mistake](#) [Ship](#) [Your pace](#) [Floor count](#)
[Ground rules](#)

Get it on your phone

The app is a web page. Put it on your home screen once and it opens like any other app, and it keeps working when the shop Wi-Fi drops.

- 1 **Open `prod-through-inv-3.dan-daf.workers.dev` in your phone's browser.**

Safari on iPhone, Chrome on Android.

- 2 **iPhone: tap the `Share` button, then `Add to Home Screen`.**

Android: tap the `:` menu, then `Add to Home screen`.

- 3 **Open it from the home screen from now on.**

It updates itself. If it ever looks stale, close it and reopen it.

Log your day

One entry per product you worked on, at the end of your shift or when you finish a batch. You log what you **finished** at each station today, not what you touched.

Boxed · XRT-50 Rescue Tube — ran out of tape at 3pm
Maria

[How to use this app](#)

app 2.25.1 · backend not reported ⓘ

1 Check the date. It's today unless you change it.

Logging yesterday's work? Change the date first.

2 Pick your own name.

Your pace and hours come from this. Never log under someone else's name.

3 Pick the product.

Tubes: the size **and** Exo or Standard. Blanks are their own product: cutting and gluing goes under the blank, not the tube.

4 Type how many you finished at each station.

Leave a station at 0 if you didn't work it. Hours next to a count are optional but they make your rate real.

5 Tap the pencil on a station if something happened there.

"Dryer down 2 hours." "Ran out of tape." Short and specific. It lands on that station's row.

6**Tap Submit My Day and read the green box.**

It lists what was logged and what materials came off the shelf. If it says "already logged today", read it: **Cancel** if you tapped twice, **OK** if this is a real second batch.

Every station, every time.

If you glued 50 blanks, log Glued 50, even if the same 50 get meshed later by someone else. Skipping a station makes the floor look like work appeared from nowhere, and the piles on the managers' screens go wrong.

No signal?

Submit anyway. The entry waits on your phone and sends itself when the connection comes back. A yellow bar says "1 entry waiting to send". Tap **Send now** when you're back in range.

Maria

[How to use this app](#)

app 2.25.1 · backend not reported ⓘ

Logged something twice, or typed 40 when you meant 4? Scroll down to **Today's totals** and tap the chip for that station. It asks how many to take back and why. Type the number and a word or two. The materials go back on the shelf too. That's the only way to undo, so use it the moment you notice.

Don't

log a negative number, and don't "fix" it by logging less tomorrow. Take it back with the chip.

Ship

When finished product leaves storage, record it on the **Ship** tab. That's how the count in storage stays right and how the office knows which channel took it.

Your units per day

last 14 days

40 units look like the same entry saved twice and are not counted here. Tell a manager if that was two real batches.

How to use this app

app 2.25.1 · backend not reported ⓘ

Floor tab

Your numbers only: today, this week, hours, and your pace at each station against the target.

The **Floor** tab shows your own work and nobody else's. Pick your name. The tick on each bar is the station target. If you log hours, you also see units per hour. That's the number a rate is built from, so it's worth the extra tap.

Floor count

WIP tab, walk the whole floor

One box per pile. Zero is a real answer.

Overview Capacity Receive Inventory **WIP** Buy

Manager PIN is still the default. It is printed in a public repository. In the sheet: **Aquamentor** → **Set manager PIN...**

One-time count per product, to tell the app what was already mid-pipeline before tracking started. Walk the floor and count the pile **waiting** at each station, plus anything finished but not shipped. Zero is a real answer — leave it at 0 if the station is clear.

Who are you?

Select your name

Notes (optional)

AQ

Aquamentor Production

Back to one product at a time

Every product, every station, one pass. Zero is a real answer. Tick **not walked** on any line you did not get to and it is left exactly as it was.

Record the whole walk

app 2 Count recorded ed ⓘ

Now and then a manager will ask for a floor count. On the **WIP** tab tap **Walk the whole floor**, then walk the shop and type what is actually sitting at each station for each product. Count what's there, not what should be there. Zero means "I looked, nothing there", so type it. Submit once at the end.

Ground rules

Your name, your work

Only log what you did, under your name.

Finished, not touched

A tube counts at a station when it's done there and ready for the next one.

Every station

Cut, Glued, Meshed... each one gets its own number, even if the same units flow through them.

Once a day, or per batch

If the app says "already logged today", stop and read it.

Undo with the chip

Never with a negative number or a smaller entry tomorrow.

Ship what leaves

If it left storage, it's on the Ship tab, with the channel.

Questions or something that looks wrong: tell Alex or John. They can see the whole floor and fix entries.

Aquamentor Production · [Open the app](#) · Managers: the manager guide and What's new are inside the app, behind the lock.
